May 3, 2007

Dear Mr. Shrestha:

This fax is in response to your review of patent application 10/783,736.

I have made all requested changes and believe to have addressed your concerns regarding the claims 1 – 7.

The following is a list of corrections:

- **Definitions for GSM, GPRS, CDPD, WAN, and LAN have been added to the definitions.**
- **Claims 4 – 7 have been modified to be dependent only on claim 1.**
- **Claims 4, 6 and 7 have had a “period” added to the end of each of the claims.**
- **Claim 5 has had the parenthesis removed and a comma added.**
- **Claim 7 has been modified to point out and distinctly claim the subject matter of the invention.**

The following statements address your concerns about prior art and being anticipated by a prior claim.

- **US-2002/0018070 – Lanier, Jaron – Video Superposition System and Method.**

This patent application describes a mechanism on how to overlay an image on top of a background image. It concentrates on dealing with a moving video image.

No where in the application does it discuss going to an external server to decide on what background image to display. Instead, US-2002/0018070 discloses HOW an image can actually be overlayed on top of another image. My application makes no claims on how an image is actually displayed, rather, my application concentrates on deciding which background image shall be displayed.

- **US-2001/0005208 – Minami et al. – Scheme for interactive video manipulation and display of moving object on background image.**

This patent application describes a mechanism for displaying variable speed video playback. Application US-2001/0005208 makes no reference on changing the background image based on real time information that was received via a network.

What follows is the modified patent application which I feel address all of your concerns.

Please review at your earliest convenience and let me know if further changes are necessary.
